GENERAL CONTRACTING

BUILDING COMMUNITY HEALTH RESILIENCE

At Evans General Contractors, we are addressing the needs of a rapidly changing Healthcare and Life Science environment by providing turn-key facility solutions to bolster Community Health Resilience.

Helping communities to recover from adverse situations and respond to shortages in healthcare and medical supplies is important to us. As a national design-build contractor, Evans is able to mobilize quickly, find cost effective solutions and provide comprehensive project development to clients across the entire spectrum of the Healthcare and Life Sciences supply chain.

Our unique understanding of end-to-end fulfillment and depth and breadth of services ensure projects receive the critical attention needed to deliver facilities on-time, within budget, and at the speed of science.

Critical Infrastructure: Resilient critical infrastructure for new facilities and renovation of existing vulnerable facilities. This includes robust product manufacturing, (N+1) redundant MEP, data/IT, campus site and other business critical systems.

Medical Device Manufacturing: Design-build project for implantable components utilizing additive manufacturing. The facility included Class 2 Div 1 & 2 manufacturing areas, N+1 redundancy for critical utilities, and offices.

Pharmaceutical Production: Multi-phased renovation to convert existing facility to pilot- & full- scale manufacturing of pharmaceutical products including pressurized metered dose inhalers, topical creams, and transdermal patches.

Sterile Processing: The 106,000 sf building supports multiple facilities for a large hospital system. The building includes 30,000 sf of sterile processing areas complete with decontamination, disinfection, & sterilization equipment.

Diagnostic and R&D Laboratory: Design-assist and design-build projects for labs both stand-alone and integral to manufacturing facilities. Laboratory types have included analytical, quality, diagnostic, R&D, vivarium and production.

Medical Office / Healthcare Facility: Renovations and expansion for regional healthcare provider: patient care and diagnostic areas (imaging, pre-/post-procedure, OR's), patient support facilities, building systems, and administrative areas.

Medical Supply Logistics & Distribution: Storage and distribution center for manufacturer and distributor of medical supplies. The 800,000 sf facility was design-build and included temperature controlled areas for sensitive products, ASRS, and support areas.

“**Providing turn-key design-build solutions is in our DNA. We are building for you now, here for you always.**”
